EXECUTIVE SUMMARY (RCT092/22)

Executive Summary Life Cycle Assessment of KORKO | 60pp set

Product Description

The product is a children's toy made up of 60 cork building blocks, produced by Korko - Made By Nature, Lda. in Portugal (Figure 1). The set of blocks come in eight shapes with ten attractive colours. The natural properties of cork make them lightweight and their texture is soft. KORKO toy weaves the link between children and nature, in a fun and intuitive way.

Table 1: KORKO general product information.

Goals

The goals of this study were the following:

To quantify the partial carbon footprint of KORKO toys (60pp set) – product stage (according to the requirements of the international standards ISO 14040, ISO 14044 and ISO 14067) – Partial CFP; To identify the inventory elements and process stages with the greatest contribution to this impact category;

To calculate the carbon balance using a methodology provided by Amorim Cork Composite (ACC).

Declared Unit

The declared unit adopted to develop this study was 1 set of 60 cork building blocks – KORKO (packaging included).

System Boundaries

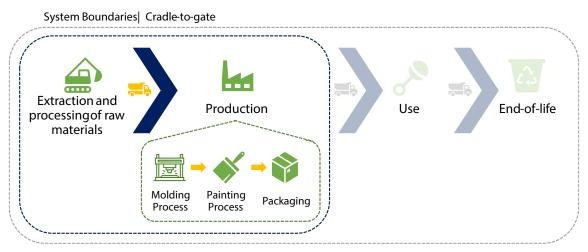

Figure 2: Life cycle model (cradle-to-gate) of KORKO | 60pp set.

Life Cycle Impact Assessment Methods (LCIA)

Environmental impacts were assessed using two methods:

IPCC 2021 (100 years) was used to evaluate the following midpoint categories: Global Warming Potential – fossil (GWP100 | fossil), Global Warming Potential – biogenic (GWP100 | biogenic), Global Warming Potential - CO₂ uptake (GWP100 | CO₂ uptake), Global Warming Potential - land transformation (GWP100 | land transformation) and Global Warming Potential total (GWP100 | Total);

Carbon balance was assessed using a methodology provided by ACC (considering carbon sequestration of the cork oak forest and GHG emissions of the product stage).

This report may not be reproduced, except if complete, without the written consent of Itecons.

Main Results

- KORKO | 60pp set Environmental Impacts

Table 2: Environmental life cycle impacts for KORKO | 60pp set (product stage).

		Product Stage:
		KORKO 60pp set
Partial CFP (GWP100 total)	kg CO ₂ eq.	8,43E-01
GWP100 fossil	kg CO ₂ eq.	2,49E+00
GWP100 biogenic	kg CO ₂ eq.	3,65E-01
GWP100 CO ₂ uptake	kg CO ₂ eq.	-2,02E+00
GWP100 land transformation	kg CO ₂ eq.	1,24E-02

Table 3: Partial carbon footprint and Carbon balance for KORKO | 60pp set (product stage).

		Product Stage:
		KORKO 60pp set
Partial Carbon footprint	kg CO₂ eq.	0,84
Carbon balance (using -73 t CO ₂ /t of cork extracted	kg CO ₂ eq.	-59,59

Partial Carbon Footprint – per Process Stage

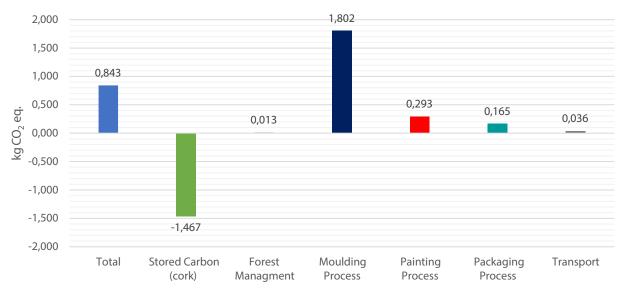

Figure 3: Partial Carbon footprint for the product stage of KORKO | 60pp set - per process stage.

Conclusions

The main conclusions of this study are:

Partial Carbon Footprint for the product stage of KORKO | 60pp set is 0,84 kg CO₂ eq. (considering carbon stored);

Carbon Balance of KORKO | 60pp set is -59,59 kg CO₂ eq. (considering carbon sequestration of the cork oak forest);

Cork used in the production of KORKO | 60pp set contributes with a negative impact (benefit) to partial carbon footprint (-1,467 kg CO₂ eq.), due to the storage of carbon throughout its life cycle, until its final disposal;

Inventory element that most contributes to the partial carbon footprint (GWP100 | total) of KORKO | 60pp set is the Binder;

Process stage that most contributes to the partial carbon footprint (GWP100 | total) of KORKO | 60pp set is the Moulding Process.
